

To Whomever it may concern

Kenneth Gao worked with us at London Stock Exchange Group as a Software Engineering Intern from 26 June 2024 to 06 December 2024. He was directly reporting to me, while also interacting and working with the wider team. During his stint with us, he also interacted with product and UX/UI functions.

During his time with us, Kenneth has demonstrated the ability to work independently and come up with creative solutions for a variety of problems. His work covered advanced concepts such as cloud native solutions using Infrastructure as code (IAC) as well as NoSQL databases, and he has also touched briefly on interacting with our internal knowledge graph service.

The work he has done has since translated into actual proof of concepts and production code that we are now using in various codebases within our product.

I believe Kenneth's high capacity for learning, his adaptability, and his enthusiasm for his work will be an asset in whichever roles he might pursue in his career and development.

Should you have any further questions about him, feel free to contact me.

Best Regards

David Wong
Senior Lead Engineer
London Stock Exchange Group
